M. Lee Allison
Director and State Geologist

Geologists/Geomorphologists

The Arizona Geological Survey (AZGS) seeks to hire one or more geologists with expertise in geomorphology, surficial geologic mapping, Quaternary geology, or environmental geology. Work may be full-time or part-time. The person(s) we hire will be involved in a variety of surficial geologic and geologic hazard/environmental mapping projects in Arizona. Work will involve interpretation of aerial photographs, field mapping of surficial deposits and other geomorphic features, description of stratigraphic and soil profiles, and use of simple GPS equipment. Map preparation will involve extensive work in ArcGIS, so familiarity with digital geologic mapping is preferred. The AZGS currently has funding for several projects through September, 2008, and expects continued funding for similar projects in future years. This is part of a growing program in environmental geology at the AZGS.

A bachelor's degree in geology or related field is required, and an advanced degree or substantial mapping experience is preferred. Salary and classification (Geologist II or Research Geologist) is dependent on qualifications. Full-time positions will include paid benefits. Positions are currently open and will be filled as soon as we find suitable candidates. Work can begin immediately. We prefer that these positions be based in our Tucson office, but we will consider basing them in our Phoenix office. Please submit resumes electronically to:
